Destat Removes Dust and Static for Ultimately Refined Sound

Ultimate Performance • Ultimate Refinement • Ultimate Luxury

The handheld DeStat is incredibly easy to use as it removes dust and static charge from audio/ video media in just one 10 second treatment. High performance enthusiasts know that static charges on analog and optical media -- LPs, CDs and DVDs – can lead to distracting noise and compromised sound. Simply hold the Destat over your media of choice and press one button! The powerful fan removes dust while the Destat's Balanced Ion Flow Generator – releasing just the right balance of positive and negative ions – eliminates static.

Almost every system component benefits from eliminating its static charge. Use the Destat to remove static from the audio/video equipment itself – best to turn them off during treatment – plus power cords, line-level interconnects, speaker cables, and metal record clamps! Some household items may even benefit from static charge removal.

The Destat is small and efficient, runs on four AA batteries and is easily used with one hand. Each dust and static removal takes a mere 10 seconds. And there's a safety circuit preventing shock from the Balanced Ion Flow Generator.

The Destat is just one of Furutech's many treatments for analog and digital playback systems and is manufactured by Orb Audio Systems.
